

Weekly Petroleum Status Report

Data for Week Ended:
February 21, 1986

Includes December 1985 Monthly Petroleum Information
(See Highlights and Page 2)

The Weekly Petroleum Status Report (WPSR) provides timely information on the petroleum supply situation in the context of historical information, selected prices, and forecasts. The WPSR is intended to provide up-to-date information to the industry, the press, planners, policymakers, consumers, analysts, and State and local governments. It is published each Thursday by the Energy Information Administration (EIA). The data contained in this report are based on company submissions for the week ending 7 a.m. the preceding Friday.

This publication is available on an annual subscription basis from the Superintendent of Documents, U.S. Government Printing Office (GPO). Ordering information and purchase of this and other EIA publications may be obtained from the GPO or the EIA's National Energy Information Center (NEIC).

Questions on energy statistics should be addressed to the NEIC. Addresses and telephone numbers appear below.

This report was prepared by the Energy Information Administration, the independent statistical and analytical agency within the Department of Energy. The information contained herein should not be construed as advocating or necessarily reflecting any policy position of the Department of Energy or any other organization.

HIGHLIGHTS

Refinery Activity

Crude oil input to refineries averaged 12.1 million barrels per day for the four weeks ending February 21, 1986. Refinery capacity utilization averaged 77.8 percent during the period. During the four weeks ending February 21, 1986, motor gasoline production averaged 6.5 million barrels per day and distillate fuel oil production averaged 2.6 million barrels per day.

Stocks

On February 21, 1986, stocks of crude oil (excluding the Strategic Petroleum Reserve) stood at 322.7 million barrels, about 2 percent below the level one year ago. Stocks of total motor gasoline, at 243.8 million barrels, were about 7 percent above the level one year ago. Distillate fuel oil stocks stood at 123.4 million barrels, about 3 percent below the level one year ago. Stocks of residual fuel oil, at 41.7 million barrels, were about 11 percent below the level one year ago.

Imports

Net imports of crude oil (including imports for the Strategic Petroleum Reserve) and petroleum products together averaged 3.7 million barrels per day for the four weeks ending February 21, 1986, about 17 percent above the average a year ago. Gross imports of crude oil (excluding the Strategic Petroleum Reserve) averaged 3.0 million barrels per day for the four-week period ending February 21, 1986.

Products Supplied

Total petroleum products supplied averaged 16.4 million barrels per day for the four-week period ending February 21, 1986, which is about 2 percent above the rate supplied a year ago. Motor gasoline was supplied at a rate of 6.6 million barrels per day, which is about 1 percent above the rate supplied a year ago. Distillate fuel oil was supplied at a rate of 3.4 million barrels per day, about 3 percent above the rate supplied a year ago.

World Crude Oil Price

- o The spot price for Norway Ekofisk Blend 42° decreased 10 cents to \$16.90 a barrel, based on Rotterdam spot cargo prices of February 20, 1986.
- o Malaysia announced a \$4.00 decrease in the price of its Miri 32° crude oil to \$23.25 a barrel, retroactive to February 1, 1986.

As a result of the price decreases noted above, the weighted average international price of crude oil as of February 25, 1986 is estimated to be \$24.42 a barrel; a decrease of 6 cents from the previous week.

Spot Market Product Prices

For the week ending February 21, 1986, the average spot market price of 98 octane gasoline on the Rotterdam market decreased \$1.23 to \$20.39 a barrel; the gasoil price increased \$2.21 to \$27.47 a barrel, and the price of residual fuel oil increased 30 cents to \$14.71 a barrel.

On the New York market, the average spot price of 89 octane regular leaded gasoline decreased \$1.11 to \$19.40 a barrel; the price of No. 2 heating oil decreased 21 cents to \$22.15 a barrel, and the price of residual fuel oil increased 25 cents to \$16.25 a barrel.

December Information From the "Petroleum Supply Monthly"

During December 1985, domestic crude oil production was estimated to have averaged 8.9 million barrels per day, and gross crude oil imports, excluding imports to the Strategic Petroleum Reserve, averaged 3.6 million barrels per day. Refineries processed an average of 12.6 million barrels of crude oil per day during December, operating at an average of 81.2 percent of total capacity. Operable capacity of crude oil distillation units at the beginning of December was reported to be 15.7 million barrels per day, about 1 percent below the capacity reported as of November 1. During December, total petroleum products supplied averaged 16.5 million barrels per day. Finished motor gasoline supplied averaged 6.8 million barrels per day, distillate fuel oil supplied averaged 3.2 million barrels per day, and residual fuel oil supplied averaged 1.4 million barrels per day. (See page 2 for December 1985 U.S. Petroleum Balance Sheet.)

U.S. PETROLEUM BALANCE SHEET, DECEMBER 1985

Petroleum Supply (Thousand Barrels Per Day)	December 1985	Cumulative January-December 1985
Crude Oil Supply		
(1) Domestic Production ¹	8,930	8,920
(2) Net Imports (Incl. SPR) ²	3,443	3,012
(3) Gross Imports (Excl. SPR)	3,565	3,098
(4) SPR Imports	74	118
(5) Exports	197	204
(6) SPR Stocks Withdrawn (+) or Added (-)	-60	-117
(7) Other Stocks Withdrawn (+) or Added (-)	28	68
(8) Product Supplied and Losses	-64	-62
(9) Unaccounted-for Crude Oil	298	204
(10) Crude Oil Input to Refineries	12,575	12,025
Other Supply		
(11) NGL Production	1,680	1,622
(12) Other Hydrocarbon Input and Alcohol Input	73	55
(13) Crude Oil Product Supplied	63	61
(14) Processing Gain	611	526
(15) Net Product Imports ³	1,321	1,253
(16) Gross Product Imports ³	2,049	1,830
(17) Product Exports	728	577
(18) Product Stocks Withdrawn (+) or Added (-)	219	155
(19) Total Product Supplied for Domestic Use	16,541	15,697
Product Supplied		
(20) Motor Gasoline	6,752	6,815
(21) Naphtha-type Jet Fuel	193	213
(22) Kerosene-type Jet Fuel	1,128	982
(23) Distillate Fuel Oil	3,236	2,859
(24) Residual Fuel Oil	1,416	1,194
(25) Other Oils Supplied ⁴	3,817	3,633
(26) Total Products Supplied	16,541	15,697

Petroleum Stocks (Million Barrels)	December 31, 1985
Crude Oil (Excl. SPR)⁵	318.7
Total Motor Gasoline	223.0
Leaded	81.4
Unleaded	108.4
Blending Components	33.2
Naphtha-type Jet Fuel	6.7
Kerosene-type Jet Fuel	33.5
Distillate Fuel Oil	143.9
Residual Fuel Oil	50.7
Unfinished Oils	106.7
Other Oils ⁶	139.9
Total Stocks (Excl. SPR)	1,023.1
Crude Oil in SPR	493.3
Total Stocks (Incl. SPR)	1,516.5

¹ Includes lease condensate.

² Net Imports=Gross Imports (line 3) + SPR Imports (line 4) - Exports (line 5).

³ Includes finished petroleum products, unfinished oils, gasoline blending components, and natural gas plant liquids for processing.

⁴ Includes crude oil product supplied, natural gas liquids, liquefied refinery gases, other liquids, and all finished petroleum products except motor gasoline, jet fuels, and distillate and residual fuel oils.

⁵ Includes crude oil in transit to refineries.

⁶ Included are stocks of all other oils such as aviation gasoline, kerosene, natural gas liquids, other hydrocarbons and alcohol, aviation gasoline blending components, naphtha and other oils for petrochemical feedstock use, special naphthas, lube oils, waxes, coke, asphalt, road oil, and miscellaneous oils.

Note: Due to independent rounding, individual product detail may not add to total.

Cumulative daily averages will be shown beginning with the March 27, 1986 issue when Petroleum Supply Monthly data for January 1986 become available.

Cumulative daily averages will be shown beginning with the March 27, 1986 issue when Petroleum Supply Monthly data for January 1986 become available.

E=Estimate based on monthly data.
 1 Includes lease condensate.
 2 Net Imports = Gross Imports (line 3) + SPR Imports (line 4) - Exports (line 5).
 3 Includes finished petroleum products, unfinished oils, gasoline blending components, and natural liquids for processing.
 4 Includes an estimate of minor product stock change based on monthly data.
 5 Includes crude oil product supplied, natural gas liquids, liquefied refinery gases, other liquid finished petroleum products except motor gasoline, jet fuels, and distillate and residual fuel oils.
 6 Includes crude oil in transit to refineries.
 7 Included are stocks of all other oils such as aviation gasoline, kerosene, natural gas liquids (including ethane), aviation gasoline blending components, naphtha and other oils for petrochemical feedstock use, special naphthas, lube oils, wax, coke, asphalt, road oil, and miscellaneous oils.
 For the current two weeks, stocks of these minor products are estimated from monthly data. (See Glossary Stock Change (Refined Products)).
 Note: Due to independent rounding, individual product detail may not add to total. The percentages are calculated using unrounded numbers.

Stocks

Crude Oil and Petroleum Products, U.S. Total¹
(Million Barrels)

Crude Oil, U.S. Total¹
(Million Barrels)

¹ Excludes stocks held in the Strategic Petroleum Refineries.

² Average level and width of average range are based on July 1982-June 1985. The seasonal pattern is based on the same period. See Appendix B for further explanation.

³ The observed minimum for total stocks in the last 10 years occurred in March 1985. See Appendix B for further explanation.

⁴ The National Petroleum Council (NPC) defines the minimum inventory level below which operating problems and distribution problems are likely to occur. In its 1983 study, the NPC recommended the minimum inventory level for crude oil to be 285 million barrels. See Appendix B for further explanation.

Residual Fuel Oil, U.S. Total
(Million Barrels)

Residual Fuel Oil by Petroleum Administration for Defense District
(Million Barrels)

¹ Average level and width of average range are based on three years of monthly data: July 1982-June 1985. The seasonal pattern is based on seven years of monthly data. See Appendix B for further explanation.

² The National Petroleum Council (NPC) defines the Minimum Operating Inventory as the inventory level below which operating problems and shortages would begin to appear in a defined distribution system. In its 1983 study, the NPC estimated this inventory level for residual fuel oil to be 40 million barrels. See Appendix B for further explanation.

Week Ending 02/21/86 Weekly Petroleum Status Report/Energy Information Administration

WEATHER SUMMARY
(Population Weighted Heating Degree Days¹)

Weather data reported in the Weekly Petroleum Status Report are now taken directly from a computerized system implemented by the National Oceanic and Atmospheric Administration, Department of Commerce.

The weather for the nation, as measured by population-weighted heating degree-days from July 1, 1985 through February 22, 1986, has been 1 percent warmer than normal and 3 percent warmer than last year.

U.S. TOTAL HEATING DEGREE DAYS (Population Weighted) and by CITY

	1985-1986 This Year	1984-1985 Last Year	Normal	Percent Change

EIA WEEKLY DATA: SURVEY DESIGN AND ESTIMATION METHODS

The Weekly Petroleum Reporting System (WPRS) comprises five surveys: the "Weekly Refinery Report" (EIA-800); the "Weekly Bulk Terminal Report" (EIA-801); the "Weekly Product Pipeline Report" (EIA-802); the "Weekly Crude Oil Stocks Report" (EIA-803); and the "Weekly Imports Report" (EIA-804). The EIA weekly reporting system, as part of the Petroleum Supply Reporting System, was designed to collect data similar to those collected monthly. In the WPRS, selected petroleum companies report weekly data to EIA on crude oil and petroleum product stocks, refinery inputs and production, and crude oil and petroleum product imports. On the Forms EIA-800 through EIA-803, companies report data on a custody basis. On the Form EIA-804, the importer of record reports each shipment entering the United States. Current weekly data and the most recent monthly data are used to estimate the published weekly totals.

Sample Frame

The sample of companies that report weekly in the WPRS was selected from the universe of companies that report monthly. All sampled companies report data only for facilities in the 50 States and the District of Columbia. The EIA-800 sample frame includes all petroleum refineries in the United States and its territories, industrial facilities that have crude oil distillation capacity and produce some refined petroleum products, and bulk terminals that blend motor gasoline. The EIA-801 sample frame includes all bulk terminal facilities in the United States and its territories that have total bulk storage capacity of 50,000 barrels or more, or that receive petroleum products by tanker, barge, or pipeline. The EIA-802 sample frame includes all petroleum product pipeline companies in the United States and its territories that transport refined petroleum products, including interstate, intrastate, and intracompany pipeline movements. Pipeline companies that transport only natural gas liquids are not included in the EIA-802 frame. Only those pipeline companies which transport products covered in the weekly survey are included. The EIA-803 sample frame consists of all companies which carry or store crude oil of 1,000 barrels or more. Included are gathering and trunk pipeline companies (including interstate, intrastate and intracompany pipelines), crude oil producers, terminal operators, storers of crude oil, and companies transporting Alaskan crude oil by water. The EIA-804 sample frame includes all importers of record of crude oil and petroleum products into the United States.

Sampling

The sampling procedure used for the weekly system is the cut-off method. In the cut-off method, companies are ranked from largest to smallest on the basis of the quantities reported during some previous period. Companies are chosen for the sample beginning with the largest and adding companies until the total sample covers about 90 percent of the total for each item and each geographic region for which weekly data are published.

	Refiners (Refineries)	Bulk Terminals	Product Pipelines	Crude Oil Stock Holders	Importers
Weekly Form	EIA-800	EIA-801	EIA-802	EIA-803	EIA-804
Monthly Frame Size	152(256)	318	89	181	1413
Weekly Sample Size	60(156)	72	50	87	87

Collection Methods

Data are collected by mail, mailgram, telephone, Telex, and Telefax on a weekly basis. All canvassed firms must file by 5:00 p.m. on the Monday following the close of the report week, 7 a.m. Friday. During the processing week, company corrections of the prior week's data are also entered.

Estimation and Imputation

After the company reports have been checked and entered into the weekly data base, explicit imputation for companies which have not yet responded. The imputed values are exponentially smoothed means of reported values for this specific company. The imputed values are treated like reported values in the procedure, which calculates ratio estimates of the weekly totals. First, the current week's data for product reported by companies in a geographic region are summed. (Call this weekly sum, W_t). Next, recent month's data for the product reported by those same companies are summed. (Call this monthly sum, M_t). Finally, let M_s be the sum of most recent month's data for the product as reported by all companies. The current week's ratio estimate for that product for all companies, W_t , is given by:

$$W_t = \frac{M_t}{M_s} \cdot W_s$$

This procedure is used directly to estimate total weekly inputs to refinery of finished products, the preceding procedure is followed separately for product pipelines. Total estimates are formed by summing over establishment t .

Weekly imports data are highly variable on a company-by-company basis. An exponentially smoothed ratio has been developed. The estimate of total weekly imports is the smoothed ratio and the sum of the weekly reported values and imputed values. An adjustment from Census data for unlicensed products because of coverage data and Census data.

Response Rates

The response rate as of the day after the filing deadline is about 80 percent for the EIA-800; 75 percent for the EIA-801; 95 percent for the EIA-802; 80 percent for the EIA-803 and greater than 95 percent for the EIA-804. However, more forms are received the next day, bringing the final response rates up. Late respondents are contacted by telephone. Nearly all of the major companies report on time. The nonresponse rate for the published estimates is usually between 2 percent and 5 percent.

Appendix B

INTERPRETATION AND DERIVATION OF AVERAGE INVENTORY LEVELS

The national inventory (stocks) graphs for total petroleum products, crude oil, motor gasoline, distillate fuel oil, and residual fuel oil in this publication include features to assist in comparing current inventory levels with past inventory levels and with judgements of critical levels. Methods used in developing the average inventory levels and minimum operating levels are described below.

Average Inventory Levels

The charts displaying inventory levels of crude oil and petroleum products (p.7), crude oil (p.7), motor gasoline (p.9), distillate fuel oil (p.11), and residual fuel oil (p.13) provide the reader with actual inventory data compared to an "average range" from the most recent 3-year period running from January through December or from July through June. The ranges are updated every six months in April and October. The 3-year period is adjusted by dropping the oldest 6 months and including the most recent 6 months. The ranges also reflect seasonal variation determined from a longer time period. The seasonal factors, which determine the shape of the upper and lower curves, are updated annually in October, using the most recent year's final monthly data.

The monthly seasonal factors are estimated by means of a seasonal adjustment technique developed at the Bureau of Census (Census X-11). The seasonal factors are assumed to be stable (i.e., unchanging from year to year) and additive (i.e., the series is deseasonalized by subtracting the seasonal factor for the appropriate month from the reported inventory levels). The intent of deseasonalization is to remove only annual variation from the data. Thus, deseasonalized series would contain the same trends, cyclical components, and irregularities as the original data. The seasonal factors were derived using monthly data from 1978-1984.

After seasonal factors are derived, data from the most recent 3-year period (January-December or July-June) are deseasonalized. The average of the deseasonalized 36-month series determines the midpoint of the deseasonalized average band. The standard deviation of the deseasonalized 36-months is calculated adjusting for extreme data points. The upper curve of the "average range" is defined as the average plus the seasonal factors plus the standard deviation. The lower curve is defined as the average plus the seasonal factors minus the standard deviation. Thus, the width of the "average range" is twice the standard deviation. The values of the upper and lower curves are presented in the table below.

Values of Average Ranges in Inventory Graphs
(Millions of Barrels)

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Lower Range												
Total Petroleum	1064.6	1049.2	1021.8	1022.5	1035.1	1044.4	1063.8	1077.1	1090.9	1097.5	1104.9	1070.9

Residual Fuel Oil	57.8	52.8	50.4	50.6	54.6	53.1	54.6	54.4	58.5	60.8	63.6	64.0

Minimum Operating Inventories

The lines labeled "Minimum Operating Inventory" (MOI) on the stocks graphs for crude oil, motor gasoline, distillate fuel oil, and residual fuel oil represent estimates of those inventory levels made by the National Petroleum Council (NPC) and published in November 1983 in "Petroleum Inventories and Storage Capacity -- An Interim Report." The NPC defines the MOI as the inventory level below which operating problems and shortages would begin to appear in a defined distribution system. The NPC report presents the findings of a study which was directed by the NPC's Committee on Petroleum Inventories and Storage Capacity. MOI estimates presented in

the report were developed by consensus through a decision-making process that relied on the judgement of Committee members based on their operating experience, on historical inventory trends, and on the results of an NPC survey of companies that provide primary inventory data to the Energy Information Administration. The estimated values are: Crude oil -- 285 million barrels; motor gasoline -- 200 million barrels; distillate fuel oil -- 105 million barrels; and residual fuel oil -- 40 million barrels.

The NPC did not develop a minimum operating inventory level for total petroleum stocks. The line labeled "observed minimum" on the "Stocks of Crude Oil and Petroleum Products, U.S. Total" graph is the lowest inventory level observed during the most recent 36-month period as published in the Petroleum Supply Monthly.

Appendix C

PROJECTION FROM THE SHORT-TERM ENERGY OUTLOOK, JANUARY 1986

The projections of "high" and "low" total petroleum demand, shown in the WPSR as total product supplied, are from the Office of Energy Markets and End Use, Short-Term Energy Outlook (Outlook), January 1986. The three forecast cases presented in this edition of the Outlook, with projections for 1986 through mid-1987, are based on different assumptions about the growth of the U.S. economy and the associated price of imported crude oil to U.S. refiners.

In the high economic growth case:

- One year growth in the real Gross National Product (GNP) is projected to be 3.8 percent for 1986 and 5.4 percent for the first half of 1987.
- U.S. refiner acquisition costs of imported crude oil are assumed to average \$20.80 a barrel in 1986, and then fall to an average of \$20.00 a barrel in the first half of 1987, in current dollars.

In the base case:

- One year growth in the GNP is projected to be 2.1 percent for 1986 and 3.3 percent for the first half of 1987.
- U.S. refiner acquisition costs of imported crude oil are assumed to average \$24.80 a barrel in 1986, and \$24.00 a barrel in the first half of 1987, in current dollars.

In the low economic growth case:

- One year GNP growth is projected to be -.2 percent for 1986 and 0.6 percent for the first half of 1987.
- U.S. refiner acquisition costs of imported crude oil are assumed to average \$27.00 a barrel in 1986, and to remain at that level in the first half of 1987, in current dollars.

The plots of the low and high product supplied estimates incorporate an additional sensitivity adjustment for weather, as estimated in the Short-Term Energy Outlook, Table 13.

For more detailed information on the above (and other components of the forecast), please refer to the published report, Short-Term Energy Outlook, January 1986.

Copies of the report are available from:

National Energy Information Center
Room 1F-048, Forrestal Building
1000 Independence Avenue, S.W.
Washington, D.C. 20585
Telephone 202-252-8800

Appendix D

CALCULATION OF WORLD OIL PRICES

The weighted average international price of oil, shown in the "Highlights" on page 1 and on page 18, is an average calculated using specific crude oil prices weighted by the estimated crude oil export volume for each oil-producing country. To develop the table shown on page 18, a list of major oil producing/exporting countries was chosen. For each country, the official selling price of one or more representative crude oils was determined by investigating a number of industry publications (i.e., "Oil Buyers' Guide", "Platt's Oilgram Price Report", "Petroleum Intelligence Weekly", and "Weekly Petroleum Argus") and by contacting oil market analysts.

Then, the appropriate crude oil volumes to be used as weighting factors for each country were determined. These volumes are estimates based on a number of sources which provide data on production, consumption, and exports for these countries. Export volumes for a number of smaller producing/exporting countries, not listed in the table, are included in the weighting factors. After the export volumes had been determined, simple mathematical weighted averages were calculated to arrive at the "Total OPEC," "Total Non-OPEC," and "Total World" prices.

The average United States (FOB) import price is derived by the same basic procedure as the world oil price, that is, taking the representative official crude oil price of a specific crude oil from a particular country and weighting this price by a certain volume of crude oil. In this case, the weighting factors are the volumes of crude oil imported into the U.S. from pertinent countries. Import volumes from a number of smaller producing/exporting countries, not listed in the table, are included in the weighting factors.

Both the import and export volumes are preliminary. Due to their origin, these estimates cannot be fully verified. These volumes are updated monthly, or more frequently when changes in oil market conditions make updating appropriate.

Appendix E

EXPLANATION OF SPOT MARKET PRODUCT PRICES

Definition of spot market product prices for the Rotterdam market: Represent the mid point of the bid/asked price range for CIF cargoes scheduled for prompt arrival at Rotterdam (within 48 hours).

Definition of spot market product prices for the New York market: Represent last sale price reported or offered. Prices are ex-duty and do not include Federal or state taxes.

General definition of spot prices: A transaction concluded "on the spot," that is, on a one-time prompt delivery basis, usually referring to a transaction involving only one cargo of product. This contrasts with a term contract sale which obligates the seller to furnish product on an evenly-spread delivery basis over an extended period of time, usually for one year.

GLOSSARY

- o **Barrel.** A volumetric unit of measure for crude oil and petroleum products equivalent to 42 U.S. gallons.
- o **CIF.** Literally, "Cost, Insurance, Freight". This term refers to a type of sale in which the buyer of the product agrees to pay a unit price that includes the FOB value of the product at the point of origin plus all costs of insurance and transportation. This type of a transaction differs from a "Delivered" purchase, in that the buyer accepts the quantity as determined at the loading port (as certified by the Bill of Lading and Quality Report) rather than pay based on the quantity and quality ascertained at the unloading port. It is similar to the terms of an FOB sale, except that the seller, as a service for which he is compensated, arranges for transportation and insurance.
- o **Cooling Degree-Days.** The number of degrees per day the daily average temperature is above 65 degrees F. The daily average temperature is the mean of the maximum and minimum temperature for a 24-hour period.
- o **Crude Oil.** A mixture of hydrocarbons that existed in liquid phase in underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Lease condensate and drips are included but topped crude oil (residual) and other unfinished oils are excluded.
- o **Crude Oil Input.** The total crude oil put into processing units at refineries.
- o **Degree-Day Normals.** Simple arithmetic averages of monthly or annual degree-days over a long period of time (usually the 30-year period 1951-1980). These may be simple degree-day normals or population-weighted degree-day normals.
- o **Distillate Fuel Oils.** Includes No. 1, No. 2, and No. 4 fuel oils, and No. 1, No. 2, and No. 4 diesel fuels. These are light fuel oils used primarily for home heating, as a diesel engine fuel (including railroad engine fuel and fuel for agricultural machinery), and for electric power generation.
- o **FOB.** Literally, "Free On Board". Pertains to a transaction whereby the seller makes the product available within an agreed on period at a given port at a given price; it is the responsibility of the buyer to arrange for the transportation and insurance.
- o **Gasoil.** European designation for No. 2 heating oil, and diesel fuel.
- o **Gross Inputs.** The crude oil, unfinished oils, and natural gas plant liquids put into distillation units.
- o **Heating Degree-Days.** The number of degrees per day the daily average temperature is below 65 degrees F. The daily average temperature is the mean of the maximum and minimum temperature for a 24-hour period.
- o **Imports.** Unless otherwise specified in this report, refers to gross imports. Imports of minor products ("other oils") include aviation gasoline, kerosene, unfinished oils, liquefied petroleum gases, plant condensate, petrochemical feedstocks, lube oils, waxes, special naphthas, coke, asphalt, and other miscellaneous oils.
- o **Jet Fuel.** Includes kerosene-type jet fuel and naphtha-type jet fuel. Kerosene-type jet fuel is a kerosene quality product used primarily for commercial turbojet and turboprop aircraft engines. Naphtha-type jet fuel is a fuel in the heavy naphthas range used primarily for military turbojet and turboprop aircraft engines.
- o **Motor Gasoline.** Finished leaded gasoline, finished unleaded gasoline, and blending components in the gasoline range. Production data represent finished leaded gasoline and finished unleaded gasoline. Stocks and imports data consist of the two types of finished gasoline and blending components. Stock change used in the calculation of motor gasoline product supplied is the change in finished motor gasoline stocks.
- o **Operable Capacity.** The maximum amount of input that can be processed by a crude oil distillation unit in a 24-hour period, making allowances for processing limitations due to types and grades of inputs, limitations of downstream facilities, scheduled and unscheduled downtimes, and environmental constraints. Includes any shutdown capacity that could be placed in operation within 90 days.
- o **Petroleum Administration for Defense Districts (PADD).** Five geographical areas into which divided by the Petroleum Administration for Defense for purposes of administration. These states listed below:
 - PADD 1: Connecticut, Delaware, District of Columbia, Florida, Georgia, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia.
 - PADD 2: Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Nebraska, North Dakota, Ohio, Oklahoma, South Dakota, Tennessee, Wisconsin.
 - PADD 3: Alabama, Arkansas, Louisiana, Mississippi, New Mexico and Texas.
 - PADD 4: Colorado, Idaho, Montana, Utah, and Wyoming.
 - PADD 5: Alaska, Arizona, California, Hawaii, Nevada, Oregon, and Washington.

Population-Weighted Degree-Days. Heating or cooling degree-days weighted by the population of the area in which the degree-days are recorded. To compute State population-weighted degree days, each State is divided into from one to nine climatically homogeneous divisions which are assigned weights based on the ratio of the population of the division to the total population of the State. Degree-day readings for each division are multiplied by the corresponding population weight for each division and these products are then summed to arrive at the State population-weighted degree-day figure. To compute national population-weighted degree-days, the Nation is divided into nine Census regions comprised of from three to eight States which are assigned weights based on the ratio of the population of the region to the total population of the Nation. Degree-day readings for each region are multiplied by the corresponding population weight for each region and these products are then summed to arrive at the national population weighted degree-day figure.

Product Supplied. A value calculated for specific products which is equal to domestic production plus net imports (imports less exports), less the net increase in primary stocks. Total products supplied is calculated as inputs to refineries, plus estimated refinery gains, plus other hydrocarbon input, plus product imports, less product exports, less the net increase in product stocks. Values shown for "Other Oils" product supplied are the difference between total product supplied and product supplied values for specified products. Other oils product supplied incorporates crude oil product supplied and reclassified product adjustment.

Refiner Acquisition Cost of Crude Oil. The average price paid by refiners for crude oil booked into their refineries in accordance with accounting procedures generally accepted and consistently and historically applied by the refiners concerned. Domestic crude oil is that oil produced in the United States or from the outer continental shelf as defined in 43 USC Section 1131. Imported crude oil is any crude oil which is not domestic oil. The composite is the weighted average price of domestic and imported crude oil. Prices do not include the price of crude oil for the SPR.

Refinery Capacity Utilization. Ratio of the total amount of crude oil, unfinished oils, and natural gas plant liquids run through crude oil distillation units to the operable capacity of these units. In the period 1979-1984 the refinery capacity utilization for all U.S. refineries ranged between 87 percent and 65 percent. The ratio for an individual refinery may fluctuate much more depending on the type of crude and other raw materials processed, the types of products produced, and the operating conditions of the refinery.

Residual Fuel Oils. Includes No. 5 and No. 6 fuel oils which are heavy oils used primarily for electric power generation, for industrial and commercial space heating, as a ship fuel, and for various industrial uses.

Retail Motor Gasoline Prices. Motor gasoline prices calculated each month by the Bureau of Labor Statistics (BLS) in conjunction with the construction of the Consumer Price Index (CPI). These prices are collected in 85 urban areas selected to represent all urban consumers--about 80 percent of the total U.S. population. The service stations are selected initially, and on a replacement basis, in such a way that they represent the purchasing habits of the CPI population. Service stations in the current sample include those providing all types of service (i.e., full-, mini-, and self-service).

Stock Change (Refined Products). Component of Product Supplied calculation shown on U.S. Petroleum Balance. The product stock change shown on the U.S. Petroleum Balance Sheet for the current 4-week period is calculated in the following way; an average daily stock change is calculated for major refined products (i.e., all actual reported stocks); this stock change is added to an estimate for minor product stock change based on historical monthly data; a daily average stock change for refined product stocks for the 4-week period is then calculated. To calculate minor product stock change, the stock levels shown for other oils in the stock section of the balance sheet are used. These other oils stock levels are derived by: 1) computing an average daily rate of stock change for each month based on monthly data for the past six years; 2) using this daily rate and the minor stock levels from the most recent monthly publication to estimate the minor product stock level for the current period.

Stocks. For individual products in the WPSR, quantities held at refineries, in pipelines, and at bulk terminals which have a capacity of 50 thousand barrels or more, and in transit thereto. Stocks held by product retailers and resellers, as well as tertiary stocks held at the point of consumption, are excluded. Stocks of individual products held at gas processing plants are excluded from individual product estimates but included in "Other Oils" estimates and "Total."

Unaccounted-for Crude Oil. A term which appears in U.S. Petroleum Balance Sheet. It reconciles the difference between data (or estimates) about supply and data (or estimates) about disposition. Its value can be positive or negative since it is a balancing term. As it appears in the monthly publications, it reflects the accuracy of the reported data. Because the unaccounted-for crude oil figure reflects the accuracy of reported and estimated figures, one would expect the figure to be larger in balances using preliminary or estimated data and smaller in balances using final data. In fact, the published figures confirm this expectation. In the WPSR, four-week averages for the previous year are interpolated from final monthly data, so that the unaccounted-for crude oil value for the previous year is considerably smaller than that for the current period.

United States. For the purpose of the report, the 50 states and the District of Columbia. Data for the Virgin Islands, Puerto Rico, and other U.S. territories are not included in the U.S. Totals.

Energy Information Administration
Electronic Publication System (EPUB)
User Instructions

Selected Weekly Petroleum Status Report (WPSR) and Petroleum Supply Monthly (PSM) statistics are now available electronically on the Energy Information Administration (EIA) Computer Facility. Public access to these machine readable statistics is possible by dialing (202) 252-8658 for 300 baud or 1200 baud line speeds. Communications are Asynchronous and require a standard ASCII-type terminal. There is no charge for this service. Although there is not a required password, you will be requested to use your telephone number as a user identifier. This service is available 7 days per week (8:00 a.m. - 11:00 p.m., Monday thru Friday, 10:00 a.m. - 6:00 p.m., weekends and holidays). Weekly statistics are updated on Wednesday (Thursday in the event of a Holiday) after 5:00 p.m. Monthly data for the current available month is also provided and is updated by 5:00 p.m. on the 24th of the month. Questions or comments should be directed to T.C. Swann at (202) 252-1155.

Access Instructions:

- 1) DIAL (202) 252-8658
- 2) HIT RETURN (CARRIAGE RETURN) TWO OR THREE TIMES UNTIL THE
EPUB BANNER APPEARS

WELCOME TO THE
ENERGY INFORMATION ADMINISTRATION
ELECTRONIC PUBLICATION SYSTEM

- 3) SELECT THE STATISTICS YOU WISH FROM THE MENU

THE FOLLOWING REPORTS ARE AVAILABLE.
WPSR - WEEKLY PETROLEUM STATUS REPORT
PSMR - PETROLEUM SUPPLY MONTHLY
STKS - PSM STATE STOCKS TABLE
PLEASE ENTER THE DESIRED REPORT ID...
WPSR

- 4) ENTER YOUR 10 DIGIT PHONE NUMBER

\$WP1081 LOGON IN PROGRESS AT 13:23:22 ON MAY 9, 1984
PLEASE ENTER YOUR PHONE NUMBER...

- 5) YOU WILL THEN SEE A BANNER WHICH SHOWS THE REPORT YOU HAVE SELECTED AND PAUSES TO
ALLOW AMPLE TIME TO GET READY TO RECEIVE OUTPUT

YOU HAVE SELECTED WEEKLY STATISTICS FROM THE
WEEKLY PETROLEUM REPORTING SYSTEM. THIS
SYSTEM WILL DISPLAY THE LATEST U.S. PETROLEUM
BALANCE SHEET AND THE MOST RECENT 5 WEEKS OF
WEEKLY PETROLEUM STATUS REPORT DATA. PLEASE
TURN ON YOUR PRINTER NOW IF YOU WISH TO OBTAIN
HARD COPY OUTPUT.

(PRINTING WILL BEGIN IN 20 SECONDS)
